Professional Experience

Software Engineer (iOS) Sep 2025 – Present
Softzino Technologies *Dhaka, Bangladesh*

- **Authored, published, and maintained a shared SwiftUI design-system + networking Swift Package (SPM)** — a dozen+ reusable components (charts, toasts, alerts, HTML renderer, sheets, swipe actions) adopted across all feature modules to standardize UI and cut duplication.
- Built the app's **networking foundation** — a generic Moya layer (typed results, reusable Backend/DataSource, async/await) secured with **TLS certificate pinning**, **OAuth 2.0 enterprise SSO**, and session management.
- Scaled a modular **11-target Tuist codebase (~77K LOC)** on clean 5-layer MVVM with protocol-oriented DI (13 repositories), plus **custom Tuist tooling** generating all targets + 6 build configs across 3 environments.
- Led migration from **Combine to Swift Observation** (@Observable, 40+ files) and adopted async/await concurrency.
- Built a **custom @Observable navigation router** over NavigationStack with Jetpack-style semantics (popUpTo, launchSingleTop) across 32 typed destinations.
- Implemented **localization** with runtime in-app language switching (no restart).

Associate Software Engineer (iOS) Mar 2023 – Aug 2025
Softzino Technologies *Dhaka, Bangladesh*

- Delivered **enterprise retail modules end-to-end** (Survey, Focus Audit, Replenishment, Uniform Ordering, Site Alerts) for apps on **35,000+ devices**, including a **dynamic, server-driven survey engine** with 14+ question types and skip/display logic.
- Integrated **9 feature API groups** on the shared networking layer with multipart photo upload, response caching, and robust error/session handling.
- Built **offline-capable data flows** (SwiftData, auto-save, caching) and optimized image-heavy catalogs with **Kingfisher downsampling**, lazy grids, and pagination for low-network reliability.
- Bridged **UIKit into SwiftUI** via UIViewRepresentable (camera capture, DGCharts) and SwiftUIIntrospect for drag-to-reorder lists; visualized completion/score data with interactive charts and progress rings.
- Drove quality via **accessibility** (VoiceOver + Dynamic Type, 150+ files) and **250+ XCTest unit/UI tests** with protocol-based mocks and Given-When-Then naming.

Intern Software Engineer (iOS) Sep 2022 – Feb 2023
Softzino Technologies *Dhaka, Bangladesh*

- Built SwiftUI feature screens and reusable components in an MVVM + UseCase/Repository architecture.
- Integrated REST APIs with URLSession and Alamofire, handling JSON decoding and error/loading states.
- Implemented VoiceOver and Dynamic Type accessibility on assigned screens.
- Wrote XCTest unit tests with stubbed dependencies and Given-When-Then naming.
- Collaborated via Git/GitHub (branches, PRs, code review); used Postman for API testing.

Tools & Technologies

Languages	Swift, C, C++, Java, JavaScript, SQL
iOS & Frameworks	SwiftUI, UIKit (interop), Combine, Swift Concurrency (async/await), Observation (@Observable), SwiftData, AVFoundation, Localization (i18n)
Architecture	MVVM, Clean Architecture, SOLID, Dependency Injection, Protocol-Oriented Programming, Design Systems / Reusable Component Libraries
Networking & Services	URLSession, Alamofire, Moya, REST, TLS certificate pinning, Firebase
Libraries	Kingfisher, DGCharts, Lottie, IQKeyboardManager, SwiftUIIntrospect
Tooling	Tuist, Swift Package authoring & publishing (SPM), Xcode, Instruments, mise, Git/GitHub, Postman
Testing	XCTest, XCUITest, protocol-based mocking/stubs

Education

Bachelor of Computer Science and Engineering – Southeast University, Dhaka, Bangladesh May 2018 – Oct 2022
CGPA 3.93
